

CHANNEL LETTERS & LOGOS

- With or without illuminated systems

- Our factory is not the largest, but we are one of the leading manufactures in europe, with state of the art equipment
- We are constantly optimizing and investing to ensure development.
- Everything is produced under one roof
- Established in 2004 in Siauliai, Lithuania
- More than 50 skilled and dedicated employees
- We Work according to ISO 9001 / EN1090-1; 1090-2 / ISO 3834-2
- > 3000 m2 of production and storage area
- We are able to export to most of Europe
- We have our own sales departments with local sales teams in our primary markets

P00

Milled out letters

P00 is used for installations and projects where there is no need for a solution with built-in LED lighting. Depending on the choice of material and font, many different expressions can be achieved from elegant to raw. 3D effect can be achieved through one of the many installation methods, just as indirect or direct lighting from for example, spotlights can create different effects and "life".

Design: letter / logo milled out of material without channel letter returns.

Material: many options such as plexi, PVC, aluminum, stainless steel, etc.

LED light: no

Treatment: Untreated, powder lacquer coating, wet lacquer coating, surface treatment as required.

Color: Our standard is powder lacquer coating with color codes in RAL. If liquid coating is used the color coding will be in NCS.

Installation options: P00 can be mounted on facade or walls directly with screws through the front - with double-sided tape - with the snap fix system - with studs - on lacquered box - on lacquered profiles - or a customer-defined method.

Setup: 1: 1 setup template is provided

P01

3D without lighting

P01 is used for installations and projects where a 3D effect is desired, created by the depth of the channel letter returns, but where a built-in LED lighting solution is not needed. Depending on the font, many different expressions can be obtained from elegant to raw. Extra power and "life" can be achieved with indirect or direct lighting from, for example, spotlights.

P01 is always made with PVC or aluminum back plate. This results in the best quality and situations, for example where birds build nests in letter / logo is avoided.

Design: letter / logo milled out of material with channel letter returns

Material: aluminum, stainless steel.

LED light: no

Treatment: Untreated, powder coating, wet coating, surface treatment as required.

Color: Our standard is powder lacquer coating with color codes in RAL. If liquid coating is used the color coding will be in NCS.

Installation options: P01 can be mounted on facade or wall with snap fix - with studs - with screw and spacer - on lacquered box - on lacquered profiles - customer-defined method.

P₃

3D Backlit with led

P03 is used for installations and projects where a solution with built-in LED lighting is desired. P03 with back lit channel letters is an elegant solution where text and/or the logo will be surrounded by scattered light, also called corona – the same effect seen in the sky during a solar eclipse. Different expressions can likewise be obtained depending on the depth chosen.

P03 always comes with clear plexi backing.

Design: letter / logo milled out of material with channel letter returns

Material: aluminum, stainless steel.

LED light: yes

Treatment: Untreated, powder coating, wet coating, surface treatment as required.

Color: Our standard is powder lacquer coating with color codes in RAL. If liquid coating is used the color coding will be in NCS.

Installation options: P03 can be mounted on facade or wall with snap fix - with studs - with screw and spacer - on lacquered box - on lacquered profiles - customer-defined method.

P₄

3D With LED lighting through front

P04 is used for installations and projects where a solution with built-in LED lighting is desired. P04 is an elegant solution where text and/or logo appears just as bright in the Night as it would in broad daylight thanks to 3M technology. Using different foil types such as translucent and block-out, company colors can be expressed in the sign. Many companies use black text which is incompatible with light through the front, but this is solved with a special foil from 3M that unlit appears black and by lighting appears white - a solution also called day and night. Different expressions can also be obtained depending on the depth chosen.

P04 always comes with a plexi front

Front, design: letter / logo where front is milled out of opal plexi. The front is held together with the channel letter returns with lacquered aluminum.

Letter return design: The letter sides is normally aluminium as standard, but is also offered in stainless steel

Material: aluminum, stainless steel, plexi

LED light: yes

Treatment: Untreated, powder coating, wet coating, surface treatment as required.

Color: Our standard is powder lacquer coating with color codes in RAL. If liquid coating is used the color coding will be in NCS.

Installation options: P04 can be mounted on facade or wall with screw through back plate - with snap fix - with stud - with screw and spacer - on lacquered box set - on lacquered profiles - customer defined method.
